LP-II STQA

Mini Project-2

Rollno- 41270 Shubhankar Gaikwad 41269 Shrut Shah

Date- 29/10/20

Output-

Mini-Project 2:

Create a small web-based application by selecting relevant system environment / platform and programming languages. Narrate concise Test Plan consisting features to be tested and bug taxonomy. Narrate scripts in order to perform regression tests. Identify the bugs using Selenium Web Driver and IDE and generate test reports encompassing exploratory testing.

SYSTEM-

BBQHouse-BBQ House is an online web application for a restaurant. Customers can register and login to view the menu, place orders or even book tables for a given date. The user can experience table booking and food ordering facilities while sitting at home. Details about restaurant are also displayed with different branches and history.

1. Features to be tested - (Complete test plan document attached separately)

TEST CASE TABLE- Tests to be executed

Test Case	Test Case Name	Objective	Description	Expected Result
SeleniumTest1	LoginTest	To check the login functionality of app	Run the web app to check the login page functionality.	Test case passes on providing valid input and app navigates to Index page
SeleniumTest2	FailedLoginTest	To check the output when incorrect information is entered	Checks for the test data of user in the database.	Login failed
SeleniumTest3	SignupTest	To check the working of signup and registration page	Test explores the sign up page features and validates the data functions.	Successful signup and registration of new user details into the table.
SeleniumTest4	OrderTest	To explore the working of food ordering page	Explores the navigations on ordering page and various features like item selection, final bill calculation.	Successful able to place orders
SeleniumTest5	TableBookingTest	To explore the working of table booking feature of the web app		Succesfully able to book a table

			guests etc	
SeleniumTest6	NavigationTest	To check the complete navigation of the app using automated test scripts	Explore the full functionality of the web app from login, ordering to checkout	Smooth working and exploration of the app.
TestSuite1	FinalTestSuite	Test suite which runs all test cases one by one	Run all the tests for the iteration on the Selenium server.	Most of test cases (>85%) passed. Run using Selenium IDE and scripts and report using TestNG.

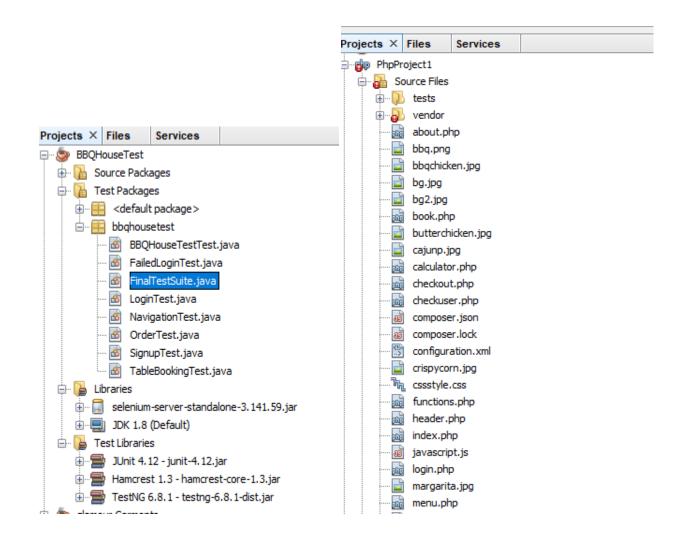

2. Bug taxonomy

INTERFACE BUGS -	I		I I
Faulty GUI and navigations	Low	Low	Make UI constant so it looks same on different devices. Display of proper error messages. Check Swing component's event action listener code. Make sure that alerts that are opened during navigation are handled properly.
INTEGRATION AND SYSTEM BUGS-			Install required IDV version 1.9. IDBC
Improper system setup	Medium	Medium	Install required JDK version 1.8, JDBC connector. Make sure that ports required for selenium server and apache server are free.
TEST AND TEST DESIGN BUGS-			Install proper testing tools- Install
Unsuccessful testing of functionalities	Medium	Medium	relevant Chrome drivers, Selenium IDE plugins, Selenium standalone server, TestNG.
Non-availability of Independent Test environment and accessibility	Medium	High	Due to non availability of the environment, the schedule gets
			impacted and will lead to delayed start of Test execution.
Delayed Testing Due To new Issues	Medium	High	During testing, there is a good chance that some "new" defects may be identified and may become an issue that will take time to resolve. Find a suitable method to run the selenium scripts for the project. PHP export option is not available for newer versions of Selenium IDE, so convert into Java and run tests in a designated test project to explore the web app functionality.

4.2. Test Risks and Mitigation Factors- Bug Taxonomy

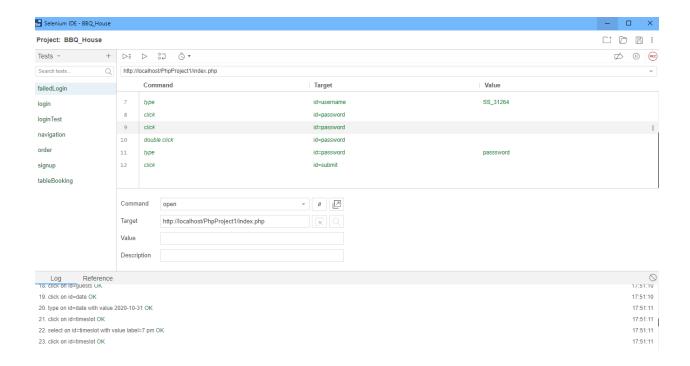

Risk	Prob.	Impact	Mitigation Plan	
DATA BUGS- User sensitive data loss	High	High	 Delete current user specific cookie data after logout User should be able to update only his/her data 	
FUNCTIONALITY BUGS- Buttons fail to access proper data	Medium	High	 Check the connection to database. Ensure proper functional working through unit tests 	
CODING BUGS- Database connection failure	Medium	Critical	Ensure proper jdbc connectors are present and database login details are accurate.	

3. Web app code structure

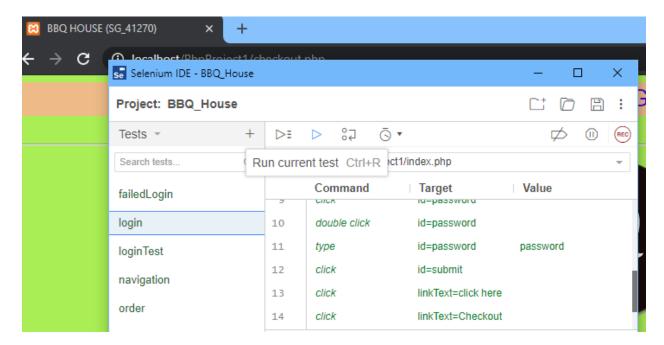

4. Testing-

Selenium IDE for Chrome Browser

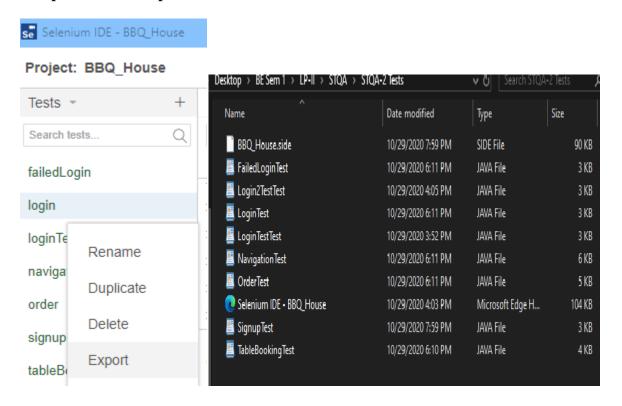

Generate and run Selenium exploratory test

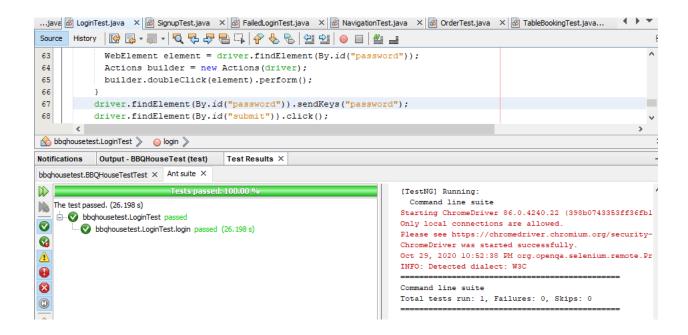

Preparing to run your test

4. Export the test scripts

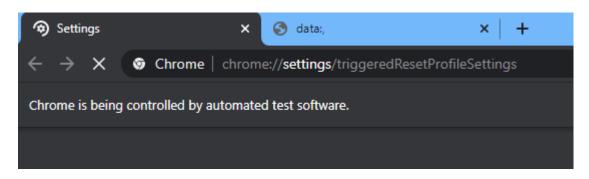

5. Create NetBeans project for regression testing and running selenium scripts on a standalone server

First with generated script

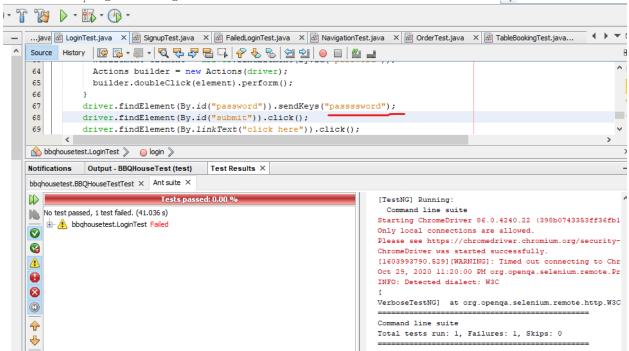

Now regression test by changing code inputs

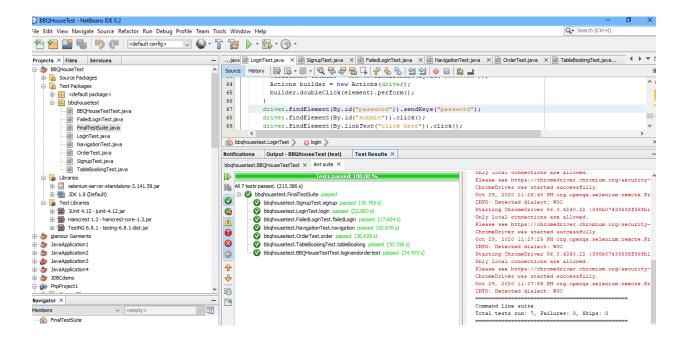

Result for wrong data- Login fails

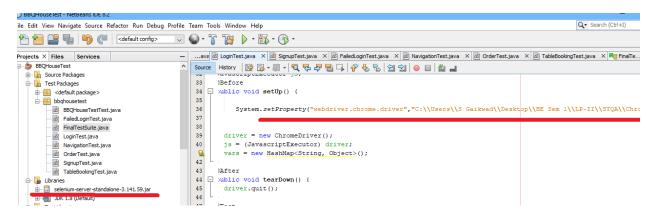

6. Junit/ TestNG test suite- Run all the tests and generate reports - Automated exploratory testing using Selenium

Make sure that selenium-standlone-server jar file is included in library jars.

And also ensure that proper web driver(Chrome or Firefox) is included.

7. Store the TestNG reports in pdf file and Selenium IDE web page.
